

Engineering the future for girls

University of Strathclyde
7th-9th June 2021

**Join us in shaping the world in a simple,
safe and efficient way.**

**Are you a girl in S3
going into S4 thinking
about your future career?**

Are you about to choose your key subjects or thinking about what your options are beyond school? If you see yourself as an engineer of the future or have never considered engineering as a career option before but want to find out more about it, our Engineering the Future for Girls programme is just for you.

The programme, a partnership between the University of Strathclyde, BP and BAM Nuttall, will move online for 2021 and there are 100 places available for female school pupils in S3.

Virtual sessions will run over three mornings from Monday 7th - Wednesday 9th June 2021. This is a chance to hear from employees at BP and BAM Nuttall as well as staff and students from the University who will provide an insight into studying and working in the field of engineering. There will also be a group project for pupils to take part in over the three sessions.

Find out more about the programme and the application process at the link below.
